Problem Statement: Design a digital FIR High Pass Filter using Rectangular Window. The following specifications are:

Cut-off Frequency = 0.3π

Length = 51

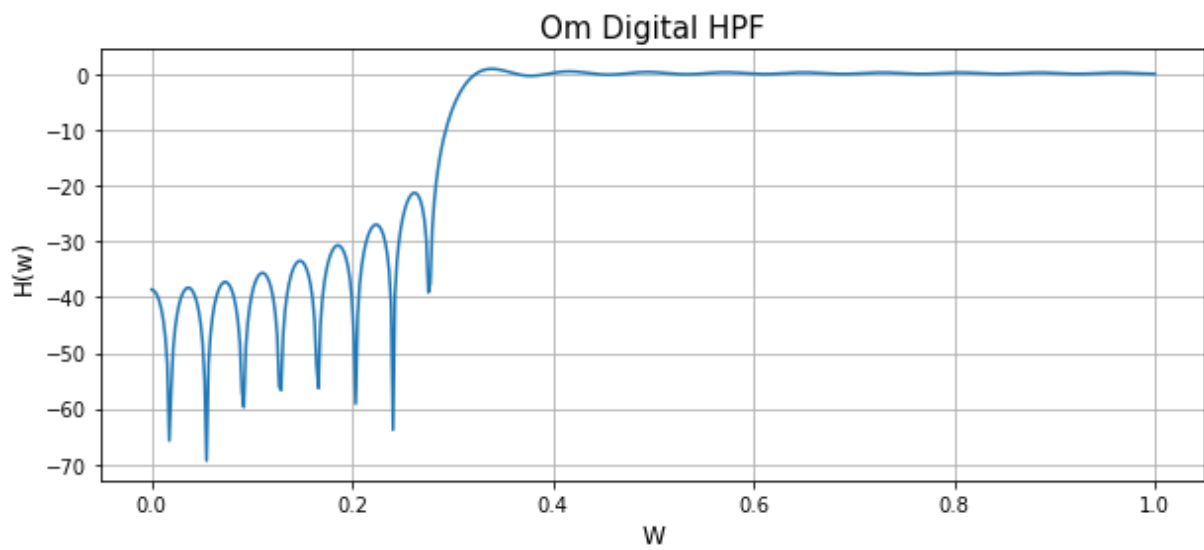

```
In [1]: # Importing in-built libraries of python
import numpy as np
import matplotlib.pyplot as plt
import scipy.signal as signal
```

```
In [2]: # Design of FIR HPF using Rectangular Window
N = 51 # Type - I
b = signal.firwin(N, cutoff = 0.3, window = 'rect', pass_zero = False)
a = 1
print(np.round(b, decimals = 2))
```

```
